The Allstate America's Best Drivers Report® tabulates property damage collision frequency of Allstate insured drivers from 2011-2012. The report analyzes the 200 largest cities from the U.S. Census Bureau's Annual Estimates of the Population for Incorporated Places over 50,000, measured for 2012 as of July 1, 2013. In prior years, neighboring cities that shared zip codes also shared rankings. This only impacted a minimal number of cities; however, in 2014, the report used geolocation to increase accuracy and there are no longer shared rankings. The Allstate Best Drivers Report is produced solely to boost the country's discussion about safe driving and to increase awareness of the importance of being safe and attentive behind the wheel. The report is not used to determine auto insurance rates. U.S. Census Bureau data was used to obtain population and population density factors. For the precipitation factor, National Oceanic and Atmospheric Administration (NOAA) data was utilized.
